Job seekers: the segment where voice should win first

Five ChatGPT mobile segments in India

Segment	Base size	Voice fit	Reachable
Students (18–24)	High	Medium	High
Job seekers & freshers (21–30) ✓	**High**	**High**	**High**
Content creators	Low	High	Medium
Regional-language users	Growing	Very high	Low
Working professionals (30+)	Medium	Medium	Medium

11M
graduates aged 20–29 unemployed (2023) [1]

32%
feel interview-ready; 26% in Tier 3 towns [2]

94%
plan to use AI in their job search [3]

66%
say AI boosts their interview confidence [3]

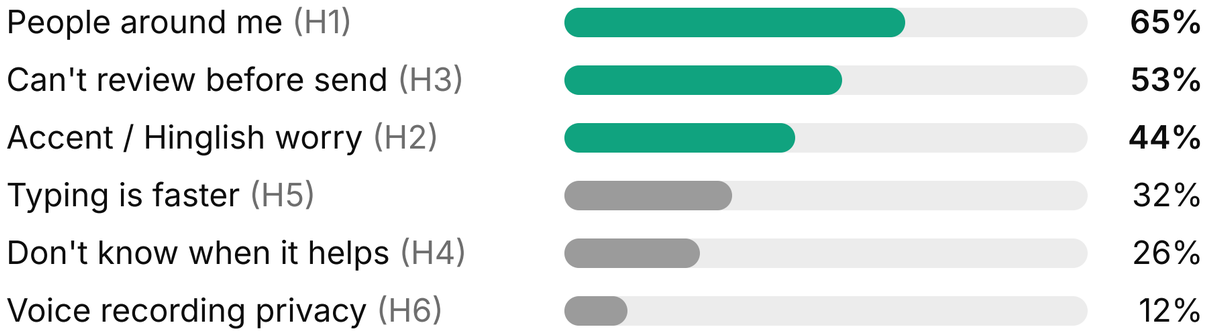

Why them Interviews are spoken. If voice can't win for **mock-interview practice**, it won't win anywhere — and a weekly prep habit makes voice stick with ChatGPT's core 21–30 base.

Segment scores are a qualitative assessment. Sources: [1] State of Working India 2026, Azim Premji University (via Careers360) · [2] Apna Interview Readiness Index 2025 (via Business Today) · [3] LinkedIn India survey, Jan 2026 (via Careers360)

People around them: the #1 voice blocker (65%)

What stops voice use (% of respondents)

82% prep in shared spaces · comfort speaking aloud: 2.1/5 · 74% edit prompts before sending · 44% know voice exists but never use it · yet **68% would try voice mock interviews**

What we heard

"My roommate is right there. I'm not saying 'tell me about yourself' to my phone."

P1 · final-year B.Tech, Bengaluru PG · **H1**

"For a résumé line every word matters. Voice just fires it off and I fix it anyway."

P3 · job switcher, 2 yrs exp, Hyderabad · **H3**

Live test: 4 of 6 lowered their voice or looked around; 2 switched back to typing mid-answer.

Observed across all 6 interviews · **H1 + H2**

Verdicts **Confirmed:** H1 shared spaces, H3 control, H2 Hinglish · **Partly:** H4 value, H5 speed · **Rejected:** H6 privacy

Primary research: survey of 34 job seekers and freshers who use the ChatGPT mobile app (multi-select, up to 3 barriers), plus six 1:1 interviews with a live voice test.

3 / 3 · Problem Framing Canvas Built from the survey (N = 34) and 6 interviews

The barrier isn't the mic — it's where and how job seekers prep

Who
Job seekers and freshers (21–30) who use ChatGPT mobile weekly to prep for jobs

What
They type every prompt, even mock-interview practice; only 15% use voice weekly

Where & when
Late-night or commute prep in PGs, shared rooms and offices — 82% rarely alone

Why it matters
Only 32% feel interview-ready; spoken practice builds confidence, and ChatGPT misses its best voice use case

Current workaround
Type answers and read them silently (5 of 6); rehearse aloud only when alone or with a friend

Root cause
Awkward around others (65%), no review before high-stakes prompts (53%); Hinglish errors amplify (44%)

Problem statement
Job seekers in India don't use ChatGPT voice because they prep in shared spaces and need precise, editable prompts. Voice feels awkward and risky, even for spoken interview practice, where it would help most.

HMW help job seekers practise with ChatGPT by voice, even around others, with the control their high-stakes prompts need?
